the needs of healthcare professionals who inaugurated a close collaboration, aiming (https://www.siog.org/). Since November capacity of health professionals in the field more than 80 countries around the world.

The International Society of Geriatric Oncology (SIOG) announced the launch of a project called LifeChamps. LifeChamps is a project under the European Commission's research and innovation program Horizon 2020. The project is led by the International Society of Geriatric Oncology (SIOG) and involves partners from 80 countries around the world.

The project is aimed at developing a platform that will support the management of older adult cancer survivors and their caregivers. The platform will be developed through a co-creation approach, involving healthcare providers, patients, and caregivers. The project is funded under the European Commission's research and innovation program Horizon 2020.

The LifeChamps Platform integrates the ground-breaking technology of cancer care service, combining Patient Reported Experience Measures (PREMs), clinical events from Electronic Health Records (EHRs), and patients' responses to treatment. The platform will detect and obtain a person's progress over time and predict the outcome of cancer care service.

The LifeChamps project delivers a comprehensive framework that will enable healthcare providers to monitor health outcomes, prevent long-term side effects, and improve patients' quality of life. The project is funded under the European Commission's research and innovation program Horizon 2020. To learn more about the LifeChamps project and its objectives, visit www.lifechamps.eu.
